

Project: **947**

Project title: **PalMod 2.2-2.3**

Project lead: **Victor Brovkin**

Report period: **1.1.2015 - 31.12.2015**

The PalMod project started in August 2015, and while research is already ongoing, no results have been achieved up to this point (late October 2015).

To this point, computation time in PalMod 2.2-2.3 was mainly used for tests, whether model configurations work as well on mistral as they did on blizzard, as well as determining computational performance. In addition, testing the setup of EMAC for the last glacial maximum was begun, and work on this is ongoing, though first indications are that the model performs well for the glacial state.
