

Project: **951**

Project title: **Gravity Wave Interactions in the Global Atmosphere (GWING)**

Project lead: **Hauke Schmidt**

Report period: **1.1.2015 – 31.12.2015**

Due to difficulties in the recruiting process, the post-doc supposed to work in the GWING project could only start on September 15, 2015, but is progressing properly towards extending the ICON model to the lower thermosphere. At the time of writing this report (early October), no scientific or computing results can be reported. We nevertheless fully expect to have first results by the end of the year and will also use some of the allocated computing time until then.
