

MiKlip – production global

MiKlip (Mittelfristige Klimaprognose) is a BMBF-funded project on decadal climate prediction. For more information on MiKlip, visit the project website: www.fona-miklip.de

The aim of the project “MiKlip – production global” is to perform global decadal hindcasts and forecasts with the MPI-ESM and to distribute these simulations to all members of the MiKlip project via a shared dataserer (the MiKlip server). These simulations will be done within the FLEXFORDEC project in module D.
