

MiKlip – production regional

MiKlip (Mittelfristige Klimaprognose) is a BMBF-funded project on decadal climate prediction. For more information on MiKlip, visit the project website: www.fona-miklip.de

The aim of the project “MiKlip – production regional” is to collect and distribute a regional ensemble of decadal hindcasts and forecasts. These simulations will be performed in projects of module C, using the regional models CLM, REMO and WRF. The regional ensemble will be made available for all members of the MiKlip project via a shared server (the MiKlip Server).
