

As an integrative part of the PalMod Verbundprojekt, the PalMod Data Project will hold and manage all data that is centrally important for multiple PalMod scientists or work packages and provide them to all throughout the project runtime. This applies to both model data and proxy data, attached with metadata.

The project will apply for resources in 2021 together with the PalMod accounts 989, 993, 1029, 1030 as Verbund.
