MiKlip – integration and evaluation

MiKlip (Mittelfristige Klimatprognose) is a BMBF-funded project on decadal climate prediction. For more information on MiKlip, visit the project website: [www.fona-miklip.de](http://www.fona-miklip.de)

The aim of the project “MiKlip – integration and evaluation” is to collect and distribute observational datasets provided by modules A and E. The project will also provide a standardized software for the evaluation of the global and regional hindcasts, based on evaluation tools developed within module E and integrated into the standardized software by the project INTEGRATION in module D. The observational datasets and the standardized evaluation software will be made available to all members of the MiKlip project via a shared data server (the MiKlip server).
